Western Governors University,

Millcreek, Utah / B.S Software

Engineering

March 2023 - Current

Projects

1) Portfolio Landing Page (Front-End Development // Web Design)

Link: <https://marcustech.netlify.app>

Description: Web Designer landing page using Fullstack web technologies.

2) Web Calculator (HTML, CSS, Javascript)

Link: <https://calculator-two-lime.vercel.app/>

Description: A simple calculator that I created to understand Javascript - HTML interactivity. HTML provides the structure, CSS is used for design techniques, & Javascript handles the input and display actions.

3) "Stepper" (JAVA, HTML, CSS, Javascript)

Link:

Description: A cross platform, mobile-first, rhythm game geared towards discovering new music and artists.

4) Web Order Entry Application (Fullstack Javascript, JSON)

Link:

Description: During my time spent employed at Doorking, I created a tool that served as a backup for the IBM AS400 software tool. Its use-case serves as an alternative tool that takes in a value and returns a value based on previous data entered on user input.

5) KONG1 Software Synth VST (HTML, CSS, Javascript, C++)

Link:

Description: a digital sampler & subtractive synthesizer designed to create sounds & record/edit existing audio files via touch controls.

Work Experience
