Western Governors University,

Millcreek, Utah / B.S Software

Engineering

March 2024 - Current

Projects

1) Portfolio Landing Page (Front-End Development // UI Design)
Link: https://marcustech.dev
Description: Software development Site using HTML/CSS/JS. Thumbnails are custom made using CSS3.

2) Calculator.js (HTML, CSS, Javascript)
Link: https://javsacript-calculator.vercel.app/
Description: A simple calculator that I created to understand Javascript & HTML interactivity. HTML provides the structure, CSS is used for design techniques, & Javascript handles the input and display actions.

3) "Stepper" (Java, Spring Boot, HTML, CSS, JS)
Link: n/a
Description: A cross platform, mobile-first, rhythm game geared towards discovering new music and artists.

4) Web Order Entry Application (Fullstack-JS , Nodejs, MongoDB, JSON)
Link: https://informationtracker.vercel.app/
Description: During my time spent employed at Doorking, I created a tool that served as a backup for the IBM AS400 software tool. Its' use-case serves as an alternative tool that takes in a value and returns a value based on previous data entered on user input.

5) KONG1 Software Synth VST (HTML, CSS, JS, C)
Link: https://kong-1.vercel.app/
Description: a mobile synth designed to create sounds & record/edit existing audio files via touch controls.
